Morristown, Morris County, NJ

CLIENT: The Peck School

Services Provided:

- Boundary/Topographic Surveying
- Master Planning/Concept Study
- Preliminary & Final Site Plans
- Landscape Architecture
- Environmental Permitting
- Construction Layout

Project Description:

Omland Engineering Associates (OEA) provided professional surveying, engineering, planning and landscape architectural services for the Master Planning and Campus Expansion of this K through 8 private schools in the Town of Morristown. OEA worked with the project architect on the plans and approvals for an academic building and a new gymnasium. There were many challenges in the planning and design on this tight urban campus that included topographic elevation changes of 40 feet, adjacent residential and Interstate highway uses, and significant existing specimen trees. Construction of these two buildings with associated pedestrian path and athletic field improvements was completed in Summer 2008.
